| | | |
|---|---|---|
| Abdel-Magid, Y. L. | Eigenvalue placement and simultaneous stabilization using tabu search | 301–306 |
| Azad, A. K. M. | Finite difference and finite element approaches to dynamic modelling of a flexible manipulator | 145–156 |
| Bartlett, H. | Analytical solution of distributed–lumped parameter network models | 203–218 |
| Bettenhausen, K. D. | Data-driven stuctured modelling of a biotechnological fed-batch fermentation by means of generic programming | 325–332 |
| Boston, O. P. | Pressure pulsations in reciprocating pump piping systems. Part 2: experimental investigations and model validation | 239–250 |
| Bowyer, A. | A non-linear model of a rotary pneumatic servo system | 123–133 |
| Burrows, C. R. | Pressure pulsations in reciprocating pump piping systems. Part 1: modelling | 229–237 |
| Burrows, C. R. | Pressure pulsations in reciprocating pump piping systems. Part 2: experimental investigations and model validation | 239–250 |
| Chai, T. Y. | A new robust non-linear self-tuning predictive control using neural networks | 439–446 |
| Chan, C. W. | New design methods for actuator saturation compensators for proportional, integral and derivative controllers | 269–280 |
| Chen, C.-L. | Sliding mode control for non-linear systems with global invariance | 75–82 |
| Chen, J. | Robust fault detection of dynamic systems via genetic algorithms | 357–364 |
| Chipperfield, A. J. | Evolutionary $H_\infty$ design of an electromagnetic suspension control system for a maglev vehicle | 345–356 |
| Choura, S. | Reduction of residual vibrations in a rotating flexible beam with a moving payload mass | 25–34 |
| Clarke, T. | Robust eigenstructure assignment using the genetic algorithm and constrained state feedback | 53–61 |
| Cox, C. S. | Genetic algorithms in model structure and controller structure identification | 333–344 |
| Dakev, N. V. | Evolutionary $H_\infty$ design of an electromagnetic suspension control system for a maglev vehicle | 345–356 |
| Davies, R. | Robust eigenstructure assignment using the genetic algorithm and constrained state feedback | 53–61 |
| Drew, J. E. | Measurement of the longitudinal transmission characteristics of fluid-filled hoses | 219–228 |
| Ebrahimi, M. | Analytical solution of distributed-lumped parameter network models | 203–218 |
| Edge, K. A. | Pressure pulsations in reciprocating pump piping systems. Part 1: modelling | 229–237 |
| Edge, K. A. | Pressure pulsations in reciprocating pump piping systems. Part 2: experimental investigations and model validation | 239–250 |
| Edge, K. A. | The control of fluid power systems—responding to the challenges | 91–110 |
| Fang, Y. | Robust stability of uncertain linear systems with multiple time delays | 195–202 |
| Fleming, P. J. | Evolutionary $H_\infty$ design of an electromagnetic suspension control system for a maglev vehicle | 345–356 |
| Ford, D. | Robust system identification using the Hough transform | 135–144 |
| Frank, P. M. | Qualitative observer and its application to fault detection and isolation systems | 253–262 |
| French, I. G. | Genetic algorithms in model structure and controller structure identification | 333–344 |
| Freyer, S. | Data-driven structured modelling of a biotechnological fed-batch fermentation by means of generic programming | 325–332 |
| Ge, S. S. | Robust adaptive neural network control for a class of non-linear systems | 171–181 |
| Henderson, M. | Robust system identification using the Hough transform | 135–144 |
| Ho, C. K. S. | Genetic algorithms in model structure and controller structure identification | 333–344 |
| Hossain, M. A. | Evolutionary adaptive active vibration control | 183–193 |
| Hui, K. | New design methods for actuator saturation compensators for proportional, integral and derivative controllers | 269–280 |
| Ingleby, M. | Robust system identification using the Hough transform | 135–144 |
| Johnston, D. N. | Measurement of the longitudinal transmission characteristics of fluid-filled hoses | 219–228 |
| Johnston, D. N. | Modelling of transient flow in hydraulic pipelines | 447–456 |
| Karaboga, D. | Genetic algorithms with variable mutation rates: application to fuzzy logic controller design | 157–167 |
| Lam, J. | Pole assignment with minimum eigenvalue differential sensitivity | 63–74 |
| Le, T. T. | An artificial neural network based approach to fault diagnosis and classification of fluid power systems | 307–317 |
| Lee, T. H. | Robust adaptive neural network control for a class of non-linear systems | 171–181 |
| Li, Y. | Evolutionary system identification in the time domain | 319–324 |
| Lin, W.-Y. | Sliding mode control for non-linear systems with global invariance | 75–82 |
| Liu, G. P. | Robust fault detection of dynamic systems via genetic algorithms | 357–364 |
| Longmore, D. K. | Measurement of the longitudinal transmission characteristics of fluid-filled hoses | 219–228 |
